Abstract

As gravitational constant dependent on dark matter elasticity, if universe has heat death temperature of universe will fall and lead to decrease in elasticity of dark matter (space fluid) so gravity will become strong and lead to big crunch, and singularity will be formed. This singularity will explode with diameter $h/(4\pi)$ and create new universe. This universe will be xerox of old universe, so all particles are actors of Hollywood movie. Their history will become future. All events in old cosmos will be repeated in new cosmos. Cosmology is like movie.

Keywords: *T violation explained; Double slit experiment; P violation explained; Neutron antigravity field*

Introduction

Study effect of anti-gravity field on quantum world quantum phenomenon explained anti-gravity field explains P and T violation, double slit, singularity exploding creating big bang, cosmology as movie concept, universe future.

P violation explained

In previous paper I have shown Hooks Law and GR, SR, dark matter concept gravity and electromagnetic forces are same forces. Now with same concept protons can bond with neutrons as proton positive charge neutralises neutron antigravity field. This is achieved by exchange of gluons. Now if neutron number is more than protons, in that case nucleus becomes unstable, so by beta decay neutron is converted in protons. Now if such excess neutron anti-gravity field non neutralised, in case of nuclei kept in magnetic field so spin are aliened, spin is quantum state representing angular momentum, neutron anti gravity field by concept of centre of gravity, will be against of spin direction, so beta decay happens in one direction. So this explains P violation. So P violation is aberration, P symmetry not violated.

T violation explained

Now at quantum level each matter particle has small antigravity field. As anti-matter has inverse relation, anti-matter will have small gravity field which ramifies as electro magnetic field, so anti hydrogen is formed, But by this matter has time arrow backward anti matter will have time arrow forward, so after bond formation time arrow becomes backward for anti hydrogen. So anti hydrogen will have anti gravity only. So it will not able to form stars, so higher elements are not possible with anti hydrogen. This explains T violation. Antimatter to matter oscillation will take lesser time than matter to anti matter

oscillation. If you able to construct atomic clock with backward moving time for matter and normal atomic clock for antimatter, there will not be T symmetry violation. T symmetry violation is abreaction. T symmetry not violated [1].

Double slit experiment

In double slit experiment particle expands in discrete space tube creating de Broglie wave which intern creates diffraction pattern. When counter is switched on, DC current in copper wire counts particle, Now electron in motion do not remain in wire, but they spread in all space tube and their anti gravity field repels all particles, so spreading to tube is avoided so diffraction pattern disappears. So measuring does not changes pattern but process has anti gravity field and stops spreading of particles in space tube which destroys interference pattern. Legendry physicist Albert Einstein was correct , there is hidden property in particles which we don't know which creates quantum mechanics phenomenon. God does not roll dice. This property is quantum level anti gravity field [2].

Discreet tubular quantum space

As quantum level space is tube shaped, dark matter revises field in each tube in centre and slowly normal gravity exist at edge of tube, if proton enters space space it will appears as wave. Hence fundamental particles show wave particle duality. And also for each particle space tube diameter is De Broglie wavelength. And also this wave length inversely proportional to momentum, as momentum increases centrifugal force increase with negative elasticity space tube shrinks so wavelength reduces. So time arrow is oscillating at quantum level creating quantum fluctuation [3].

Anti hydrogen rim of cosmos

All antimatter created at big bang is not annihilated, as antimatter will form anti hydrogen, this anti hydrogen escaped to rim of universe with anti gravity field and it is still theirs last rim of cosmos expanding it with acceleration. Some mater is still reaching this rim due to cosmic collisions, supernova, black hole throwing mass out of event horizon. So it will annihilate theircreating rim of fire in infrared and infrared background radiation.

Second law of thermodynamics

As you have this universe is cyclic, and like movie it will repeat all events as scene, second law of thermodynamics for entire cycle, i.e singularity to big bang to heat death to collapse and singularity to ne bigbang. Entropy of universe (full cycle)=0

Result

Anti-gravity field explains P and T violation (actually its aberration) PT symmetry not violated ,double slit, cosmology is movie and universe is a cyclic universe, anti hydrogen will have anti gravity only. Such anti hydrogen is at cosmic rim expanding universe with acceleration. In case of heat death of universe as temperature falls ,elasticity of dark matter will decrease and gravity will become extreme strong leading to collapse creating singularity. Singularity will explode with diameter $\frac{h}{4\pi}$ and form new universe due to anti gravity. New universe will be xerox of old universe due to to reversal of time arrow. Each fundamental particle has history and history becomes future. New cosmos will be old cosmos movie with same history and events. Anti hydrogen at cosmic ring will meet some matter particles thrown out by events like supernova, cosmic collisions, so there will be rim of fire in infrared segment, also this will explain infrared background radiation. Second law of thermodynamics for full cycle Entropy of universe full cycle =0.

Conclusion

Anti gravity field at quantum level explains T and P symmetry are not violated, it is abreaction. Anti gravity field explains double slit experiment. Singularity always explode in big bang and creates exact old universe, second law of thermodynamic

for full cycle Entropy of universe full cycle =0. Anti hydrogen will have antigravity only.
